1

Custom Copilots in Canvas Apps

Elevate your app development with personalized copilots that guide users through tasks, optimize workflows, and significantly enhance productivity. These intelligent assistants are designed to adapt to your specific app needs.

2

Seamless Pipeline Creation

Effortlessly set up and manage pipelines within Power Apps, enabling a smoother app deployment process. This feature ensures that your applications can be updated and maintained with minimal friction, keeping your projects on track.

3

AI-Generated App Descriptions

Say goodbye to writer's block! Automatically generate compelling descriptions for your model-driven apps using AI. This not only saves valuable time but also helps improve user engagement and comprehension of your app’s features.

4

Collaborative Canvas Coauthoring

Foster creativity and teamwork with real-time coauthoring capabilities in canvas apps. Multiple team members can work together simultaneously, sharing ideas and making edits on the fly, leading to faster and more innovative app development.

5

ERD View for Complex Data Models

Gain deeper insights into your data structures with an Entity-Relationship Diagram (ERD) view. This feature, supported by Copilot assistance, helps you visualize and navigate complex data models, making it easier to design and manage your app’s data architecture.

6

Modern Screen Templates

Discover a variety of stylish, modern screen templates designed to enhance the user experience of your canvas apps. These templates not only simplify the design process but also ensure your apps look fresh and appealing to users.

Stay ahead with improved features.

Embrace the **PowerApps** Update

These enhancements simplify app creation and elevate user experience.
